OSF | ECVP 2021

We have created a permanent OSF MEETINGS repository which can be used to upload talk and poster materials.

This is an optional feature but may prove useful for providing online access to your work both during and after ECVP 2021. For example, poster presenters can upload their poster PDF to their ECVP OSF page and then provide a link from within their dedicated SLACK channel.

To create an OSF page for your talk or poster, follow these steps:

1) **Create a new, blank email message in your mail app of choice**

2) **Set the subject line to be your abstract code followed by your abstract title.** For example,

Doe_ATT_Poster_1234 : Can people attend to mulitple objects?

Use the abstract code that was sent to you by email. You can also find this in the online programme.

2) **Paste a copy of your abstract text into the body of the email**

The body of the email will be converted into the Wiki for your OSF page. You can choose to just use the abstract text or you can also include the title, authors/affiliations, as you prefer. As with all OSF project pages, once created, you will have a "Description" section where you can add further information to identity the contributors. You will also be able to fully edit the Wiki that is established with this intitial email.

3) **Include an attachment.**

This can be your final presentation if it is ready. Alternatively, you can attach a temporary document, such as a screen shot of your abstract from the online programme, or a related text document. As with all OSF project pages, once created, you will be able to add new documents and edit existing ones. **You must include some form of attachment, or your email request to create an OSF page will be declined.**

Send the email to either ECVP2021-poster@osf.io or ECVP2021-talk@osf.io depedending on the nature of your presentation.

You will receive a confirmation email from OSF with a unique link to your presentation page. You will then have full access to upload any material you choose that may relate to your work (e.g., poster PDF, preprints, video files, raw data).

You can also browse other ECVP 2021 presentations on OSF by visiting:
